① Based on 140,000 Btu/h per gallon, #2 fuel oil.

② Based on standard test procedures prescribed by the United States Department of Energy, with combustion conditions of 13% CO₂ and -0.02" W.C. draft.

③ Net I=B=R ratings are based on net installed radiation of sufficient quantity for the requirements of the building and nothing need be added for normal piping and pickup. Ratings are based on a piping and pickup allowance of 1.15. Additional allowance should be made for unusual piping and pickup loads.
